Art Unit: 2612

1. This Office action is in response to the amendment filed May 15, 2006. Claims 1-16 are pending. The specification and claims 1-15 have been amended as requested. The prior rejections of the claims under 35 U.S.C. 112, second paragraph have been withdrawn in view of the amendment. The rejection of the claims under 35 U.S.C. 112, first paragraph has been maintained since applicant has provided no argument to rebut this rejection.

- 2. Claims 1 and 10 are objected to because of the following informalities: "CUP" should be "CPU". Appropriate correction is required.
- 3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 4. Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not clear from the narrative specification or the claims what constitutes the invention and/or how to make or use the invention. The invention appears to be defined by what it is not that what it is.
- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 10, it is not clear how the address flags pertains to the product models that are indicated by the 26 English characters.

Regarding claim 2, it is not clear how a memory is installed within a CPU.

Regarding claim 8, it is not clear what is meant by a part. It is also not clear how this claims is different from claim 2.

Regarding claim 9, it is not clear what is meant by a part.

Regarding claim 11, this claim does not make sense. How does an indicator light control and indicator light?

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See Miller v. Eagle Mfg. Co., 151 U.S. 186 (1894); In re Ockert, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

- 8. Claims 10-16 are objected to under 37 CFR 1.75 as being a substantial duplicate of claims 1, 3-5, and 7-9. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).
- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2612

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

10. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rumbolt (4,713,359).

Regarding claim 1, Rumbolt teaches a remote control that automatically transmits successive signals belonging to different remote controls. The signals pertain to the function of turning an appliance on or off. When such a function is observed, the user presses a button which sets the code set on the remote control that pertains to the particular brand of appliance. This is essentially the function in applicants claim. The system in Rumbolt uses memories, a CPU, information in tables, emitter, and a timer. While the specific hardware such as first and second memory an interruption control are not taught, it would have been obvious that some equivalent means would be present to perform the same desired function.

Regarding claim 2, it is conventional to partition memory for different purposes. For example a portion of a memory may be used to store an application program while another portion is used for temporary data. It would have been obvious to used memory in a conventional manner.

Regarding claims 3-4, it is conventional to include an LED on a remote to indicate when a key is pressed. It is conventional to use an oscillator as a counter. The use of conventional items in conventional ways is considered obvious.

Regarding claim 5, Rumbolt includes a non-volatile memory for storing the function of keys and their corresponding code. It would have been obvious to use any type of non-volatile memory including EEPROM since they are functionally equivalent.

Application/Control Number: 10/662,310

Art Unit: 2612

Regarding claim 6, it would have been obvious to include a switch for setting a clock since some means must be present for input purposes.

Regarding claim 7, it id conventional for remote controls to have LCDs to display the state the remote control.

Regarding claims 8-9, see claim 2.

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Albert K. Wong whose telephone number is 571-272-3057. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on 571-272-7308. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
